

## BP-1

With an interest in Banjos, Tesla designed this Piezo pickup to be used in all types of banjos.

In days gone by, the banjo was a prominent sophisticated instrument which was always louder than its contemporaries. With amplification in later years musicians had to stand next to a microphone, which had unbalanced levels of tone and sound. With the BP-1, the banjo player can wander the stage and dance a jig knowing that his sound or tone will always be balanced.

Mounted directly under the bridge, completely adjustable, the Piezo pickup will take the natural sound, and tone directly to the audiences through amplification.

Once again a breakthrough at TESLA, Tesla pickups are designed and tested by musicians, for musicians.
